### The climate psyop: how junk data is used to terrorise the People

Listen

Intro by Steve Cook

Featured below is an article from The Conservative Woman preceded by a commentary from Roger Arthur that throw more light onto how whoever is pulling the strings that make their puppet officials and politicians dance are using fiddled stats and outright false reports to terrorise the public.

This psychological warfare caper makes money and power for somebody but that somebody isn't you or I. You and I are the patsies who are going to pay dearly for this malfeasance unless we refuse accept these shenanigans and force our politicians and officials to knock it off get honest and straight before they mis-manage us to destruction.

It's up to us.

### Commentary by Roger Arthur

IPCC models don't factor in atmospheric moisture, cloud cover or sulphur dioxide levels, because they don't know how to.

As we know, the Sun is the main driver of global temperature, which results in higher water content in the atmosphere – never mind CO2 – which follows temperature.

But H2O has a bigger greenhouse gas impact than CO2, which neither the FT nor the BBC will tell you. Neither will they make a link with Solar emission cycles, which are at an 11 year high.

<https://www.ft.com/.../f976b2fb-9a23-4a64-91bb-cb250f35853f>

It is worth noting worst U.K. drought on record was in 1540 when 1/2 million died, when CO2 levels were much lower than now.

### UK Events 2024

#### The Alternative View Presents Thomas Sheridan

Date: 20 October 2024

Time: 10:00 AM - 4:15 PM

Location: The Assembly Rooms, High Street, Glastonbury, BA6 9DU

More info

Also as seen below the number of deaths – due to extreme weather events – has reduced by more than 90% since the 1920s, in spite of a four-fold rise in population. That coincided with an upward trend in CO2 levels.

<https://reason.org/policy.../decline-deaths-extreme-weather/>

In fact extreme heat is not killing anywhere near as many people as is the cold, with fuel poverty exacerbated by net zero.

## The climate scaremongers:

### Junk data trashes the Met Office’s reputation

by Paul Homewood

SOURCE: The Conservative Woman June 7, 2024

THE Met Office clearly believe they can get away with any claim, no matter how outrageous. They have just announced that this year saw the hottest May ever in the UK; and not by hundredths, but by a whole degree. I don't think any of us need expertise in meteorology to know that this is simply absurd, even with our own short memories.

Yes, we had a few pleasant sunny days, but temperatures never rose above the ordinary. The hottest day reached an unremarkable 24.3C on the Central England Temperature index, well below the 28.9C set in 1944. Indeed, 33 years have set higher temperatures in May than this year. In the UK as a whole, the highest temperature recorded was 81F at Chertsey.

Moreover the second half of the month was distinctly cool.

Highest Daily Temperature for May

CET 1878 to 2024

<https://notalotofpeopleknowthat.wordpress.com/2024/06/04/hottest-may-believe-us-not-your-lying-eyes>

Contrast last month with May 1947, for instance, when temperatures reached 90F (32C):

The weather of the month was unusually warm, particularly in England and Wales. It was dry in north Scotland and the eastern half of England and wet on the whole elsewhere; thunderstorms occurred frequently. Conditions were quieter than usual.

**Temperature.**—Mean temperature exceeded the average by 3·1°F. in England and Wales, 2·3°F. in Scotland and 2·2°F. in Northern Ireland. As far as can be estimated it was the warmest May over England and Wales as a whole since before 1901. At Southport and Sheffield the mean temperature was the highest for May since records were started in 1871 and 1883 respectively. The period 28th–31st

was exceptionally warm; temperature rose to 85°F. or above at numerous stations in England on each of the last three days. The first three or four days were cool and a relatively cool spell occurred in southern England during the week 18th–24th.

The extremes for the month were:—(England and Wales) 90°F. in London (Camden Square) on the 31st, 32°F. at West Kirby on the 2nd and Santon Downham on the 17th; (Scotland) 81°F. at Wolfelee on the 29th, 27°F. at Dalwhinnie on the 3rd; (Northern Ireland) 75°F. at Lisburn on the 31st, 33°F. at Hillsborough on the 4th.

[https://digital.nmla.metoffice.gov.uk/IO\\_3a2c7ec8-d5af-44f1-ab15-8d6cab925b40](https://digital.nmla.metoffice.gov.uk/IO_3a2c7ec8-d5af-44f1-ab15-8d6cab925b40)

Yet according to the Met Office, May 1947 was 1.7C colder than last month.

This all raises the question whether we are actually comparing like with like, when the Met Office estimate UK temperatures nowadays and compare them with those of 50 or 100 years ago.

Recently they were forced to admit that most of their temperature station network is not fit for purpose. Because they are so poorly sited, 78 per cent of stations have uncertainty of at least 2C, according to the official World Meteorological Organisation (WMO) classifications. Nearly a third are assessed as Class 5, the lowest classification, officially regarded as junk, with uncertainty of up to 5C. The most common siting issue is being much too close to roads, buildings and even airport runways, all of which artificially raise temperatures.

The Met Office were desperate to keep this scandal secret, before being forced to release it after an FOI from the *Daily Sceptic*. The WMO clearly state that Class 3, 4 and 5 sites should not be used for climatological purposes, but that is exactly what the Met Office does.

The Met Office claim they know the temperature of the UK to a hundredth of a degree. In reality, these siting issues mean that the margin of error could be two degrees or more.

### **Wettest summer for 100 years?**

THE Met Office are now warning that we are headed for the wettest summer since 1912.

According to LBC: 'The Met Office has briefed the government and transport chiefs to prepare for at least 50 days of rain in the next three months, leading to fears over further flooding in the UK and dashing any hopes of a warm British summer. Last summer saw 40 days of rain, but the Met Office expects this summer to be even worse, jeopardising popular summer events such as Wimbledon, Trooping the Colour, Royal Ascot and many festivals including Glastonbury. The UK's wettest ever summer in 1912 saw rainfall on more than 55 days.'

Maybe the Met Office should have consulted their own meteorologists. According to their 3-Month Outlook, published the day before their warning, the chances of a wet or dry summer are fairly balanced:

**UK 3-month Outlook**

Period: June - August 2024  
Issue date: 27.5.2024  
Next issue: 1.7.2024

3-month | 1-month | About the Outlook | Shifts in likelihood | What is average? | Q&A | Find out more

### 3-month summary

- The chance of a hot summer is higher than normal but is similar to recent years
- This brings an increased likelihood of heatwaves and heat-related impacts
- The chances of a wet or dry summer are fairly balanced

<https://www.metoffice.gov.uk/services/government/contingency-planners/index>

Their long-range weather forecast for this month suggests the same, the usual mix of sunshine and showers.

The latest warning is no more than baseless scaremongering by the Met Office in pursuit of their climate agenda. In the process they are steadily trashing the organisation's reputation built up over the years by dedicated professionals, who must be turning in their graves now.

### **Labour's energy lies**

LABOUR have claimed that their plan to decarbonise the power grid by 2030 will cut household electricity bills by £300 a year.

They are lying to you.

Their claim, which emanates from the renewable lobbyist group Ember, assumes that offshore wind is much cheaper than gas-fired power. They have worked on a figure of £47/MWh at today's prices.

However the government received no offers from offshore wind last year at higher prices than that, and have therefore had to increase the auction price to £102/MWh for this year's round.

By contrast, the cost of gas-fired power, according to the government's own calculations, is only £54/MWh at current gas prices. Current wholesale prices confirm this price level. The new auction prices for onshore wind and solar power are also much higher than gas.

Market wholesale prices are now returning to pre-Ukraine war levels, and the signs are that they will stabilise.

<https://www.ofgem.gov.uk/energy-data-and-research/data-portal/wholesale-market-indicators>

Worse still, Labour's calculations are based on the Energy Price Cap in Q3 last year, when energy prices were still relatively high as a result of the war. Since then electricity bills have already dropped by more than £200 a year, wiping out most of Labour's fictitious saving.

In contrast, Labour's plans to add more renewable energy to the mix will mean subsidies increase by about £14billion a year, more than doubling the existing cost. Consequently households will be more than £500 a year worse off, not better off as Sir Keir Starmer claimed.

As for his 'Great British Energy' company, announced with great ceremony in Scotland last week, it was quickly exposed as a sham by the SNP, of all people. Contrary to Ed Miliband's repeated hints, GBE won't generate any energy, nor will it act as an energy retailer. It certainly will not replace the Big Six energy companies.

The simple fact is that its budget is so small that it will be little more than just another quango. Its capitalisation will be a comparatively tiny £8.3billion over five years, but even this cannot be funded on Labour's plan, which involves using the extra windfall tax on North Sea oil and gas, which they plan to increase from 75 per cent to 78 per cent. This will only generate a couple of hundred million a year.

It is simply a sop to Ed Miliband, who wanted £28billion to waste on renewable energy, insulation, carbon capture, grid infrastructure and goodness knows what else.

Above all, Labour's plan fails to explain what they will do when the wind does not blow and the sun does not shine once they have shut down all our gas-fired plants.
